Details:

1. Each page contains story problems on the left, and potential answers on the right. There are more answers, so many are never used.
2. Solve each story problem, and find its matching answer. If you don't find it, check your math.
3. Draw a straight line from the story to the answer. Use a straight edge. The line will pass through 1 or more letters in the middle.
4. Once you've solved all of the stories, the letters you didn't cross off are the answer. Read them from top to bottom. Two words.
5. Each page has one or two words. Together, they make a 7 word sentence. Write that sentence on the answer page.

Lautaro had collected 97 leaves on the family camping trip. However, he lost 2 of them while playing by the river. How many does he have left?

Pranav at the ice cream shop has 98 liters of Chocolate ice cream in stock. He sells 15 liters, but then the power goes out. How much is left, to sell before it all melts?

Aanya was climbing a slippery hillside. After she had climbed up 99 meters, she slipped down to the 11 meter marker. How far did she slip?

Kameko has collected 92 books to give to her friends. So far she has given away 1 of them. How many does she have left?

Aarohi has saved \$98 from her allowance. She spent \$14 on a new game. How much does she have left?

Aitana has 96 kilograms of peaches and 2 kilograms of pears. How many more kilograms does she have of peaches?
